RE: Site Management Activity Complete at D.J. Wholesale Building Materials, Brattleboro, VT (Site # 93-1489)

Dear Mr. Ouimette:

The Vermont Department of Environmental Conservation, Sites Management Section (SMS), has received the letter dated 11/15/94 from Environmental Services of America, Inc., regarding the above referenced site. Based on this letter, and information contained in our files, the SMS has concluded the following:

- Contaminated soils generated at the site have been disposed of at the Windham Solid Waste Management District landfill.
- Analysis of ground water samples collected on January 26, 1994, and analyzed using EPA Method 8020 showed no evidence of petroleum contamination.
- The previous investigations have adequately defined the site.
- No known existing source areas remain on the site.
- No unacceptable threat to human health or the environment exists on-site.
- No known migration of hazardous materials from the site is occurring.

Based on the results of this investigation, the site has been assigned a Site Management Activity Completed (SMAC) designation. Sites which the Hazardous Materials Management Division have determined require no further management are classified as SMAC. This designation does not release D.J. Wholesale Building Materials from any past or potential future liability which may arise from contamination which may originate from the site. It does mean, however, that the SMS is not requiring that any additional work be performed at this site in response to the initial contamination measured on the property. If you have any questions regarding this letter, please do not hesitate to call.

Sincerely,

Chuck Schwer, Acting Section Chief
Sites Management Section
